QU.E NO.1 EXPLAIN THE DIFFRENCE BETWEEN RELATIVE, ABSOLUTE AND MIXED CELL REFERENCING. YOU HAVE THE FOLLOWING DATA SET

VEHICLE	PRICE
Car	500000
bicycle	10500
Auto-rickshaw	25000

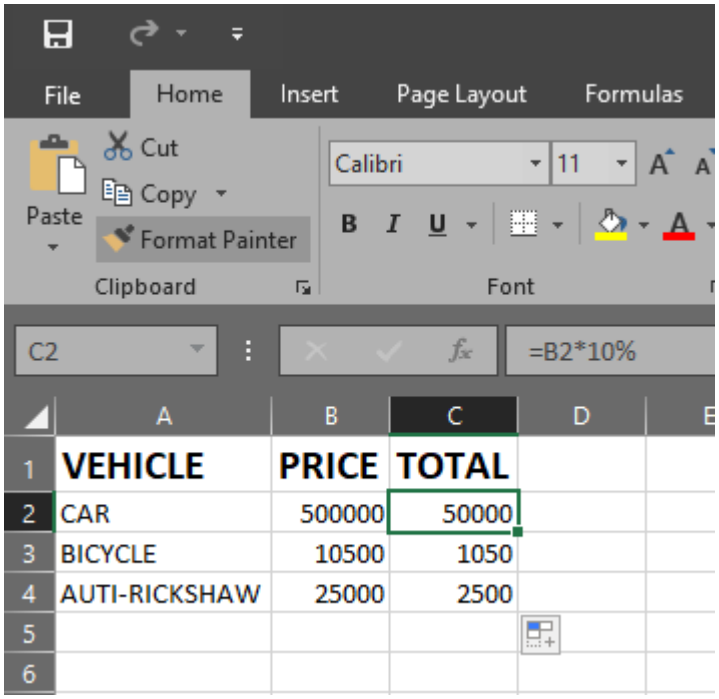
ANSWER NO.1→

- **<u>1-RELATIVE CELL REFERENCING-</u>** *Relative reference means that the cell address changed automatically when the formula is copied to another cell*
- **<u>EXAMPLE FORMULA-</u>** =B2*10%

IF We will drag the formula then :

->bicycle → =B3*10%

->auto-rickshaw→ =B4*10%

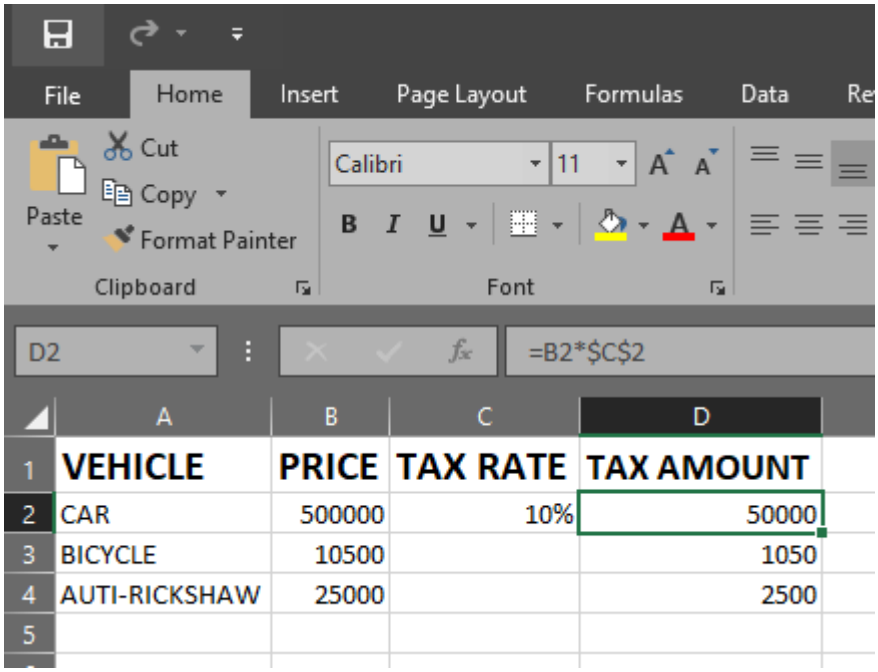


<u>2- ABSOLUTE CELL REFERENCE-</u> *Absolute reference means that the cell address remain fixed when the formula is the copied,it uses the $ symbol*

<u>Example formula</u>- =B2*C2

Here 10% rate in C2 and we will this it will not change

- *Bicycle → =B3*C2*
- *Auto –rickshaw → =B4*C2*

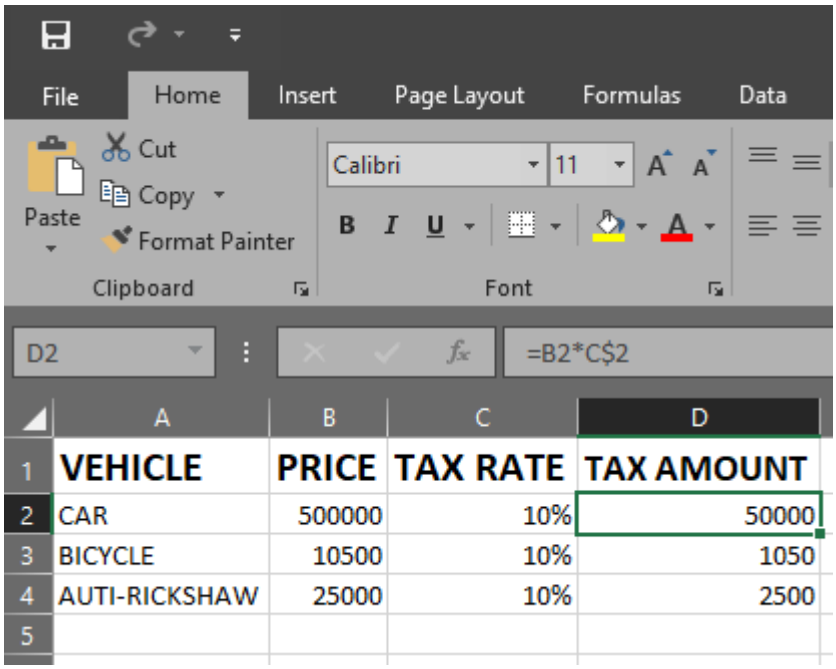


<u>3- MIXED REFERENCE-</u> Mixed cell reference is the combination of relative and absolute reference . row or column which is one is fixed not both. $ symbol is used for mixed reference

Example - =B2*C$2

-B2→ price

-C$2→ C row is fixed. But column can changes

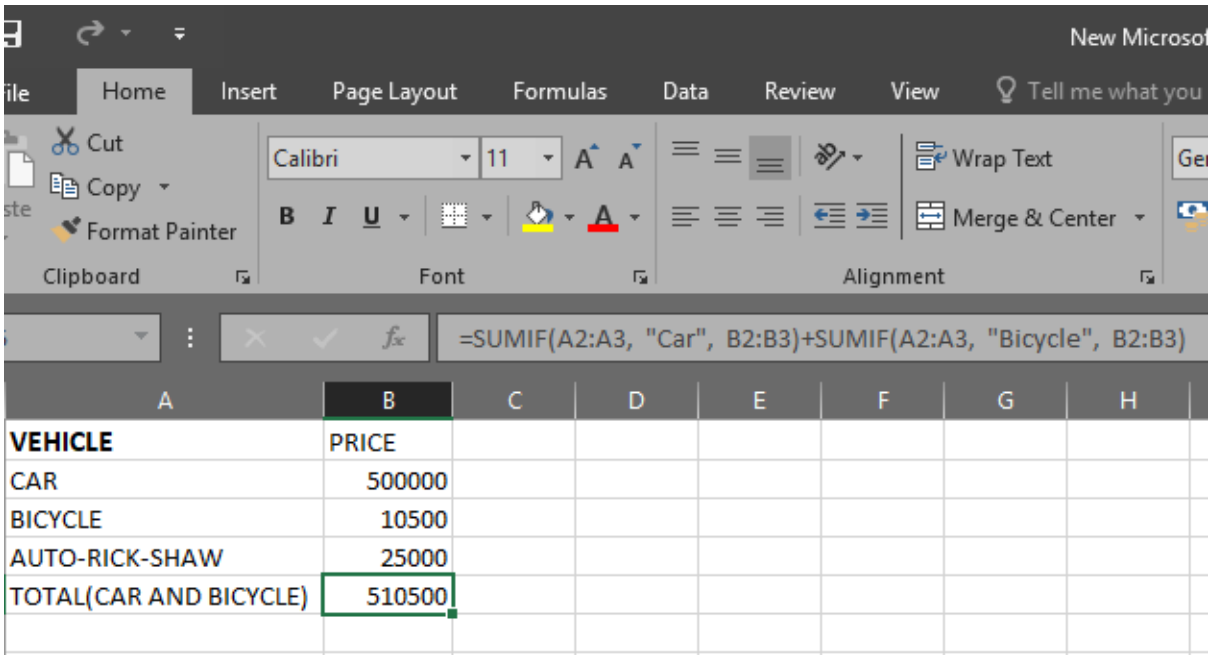


QUESTIONNO.2 write a formula to calculate the total sales of car and bicycle only only

ANSWER → PRICE OF CAR= 500000

→PRICE OF BICYCLE = 10500

FORMULA→ SUMIF(A2:A3, “Car” , B2:B3) + SUMIF(A2:A3 , “Bicycle” , B2:B3)



QUE NO. Using the data below , write a formula to calculate the average sales of items priced above 100but less than 300 :

Item	price	sales
Item A	90	1000
Item B	150	1200
Item C	250	1500

ANS NO. 3→

FORMULA : =AVERAGEIFS(C2:C4, B2:B4, “>100”, B2:B4, “<300”)

	A	B	C
1	item	price	sales
2	item A	90	1000
3	item B	150	1200
4	item C	250	1500
5		average sales	1350

QUE NO.-4 **COUNT HOW MANY CUSTOMER NAME ARE RECORDED**

ANS NO.-4 FORMULA→ =COUNTA(B2:B51)

CUSTOMER NBAME RECIRDED = 50

	A	B	C	D	E	F	G
43	1042	Neeraj Kapoo	South	Pencil	30	5	28-02-2024
